Geometry Unit 7: Congruence transformations

Bronx Early College Academy

Christopher J. Huson PhD

17 January 2023 - 3 February 2023

Learning Target: I can slide a figure

HSG.CO.A.5 Congruence transformations

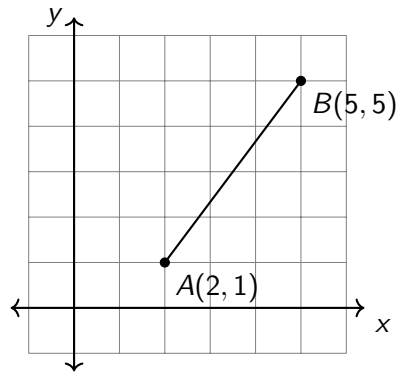
7.1 Tuesday 17 January

Do Now

1. Review your Jumprope grades
2. Find the rise and run of the line segment $\overline{AB}$.

Lesson: Translation, classwork practice

Homework: Complete the classwork practice



Translation

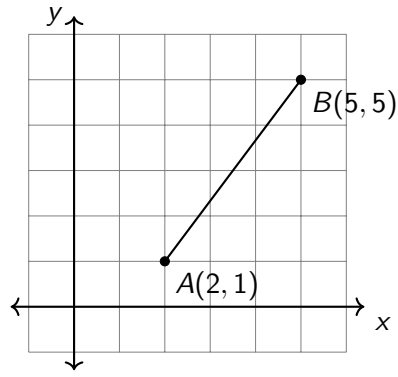
Rise is plus 4, run is plus 3.

$$A(2,1) \rightarrow B(5,5)$$

Translate Move a figure horizontally and vertically (slide)

Vector A quantity with both magnitude and direction

$$\overrightarrow{AB} = (3,4)$$



Example: Translate point A up two units and right four units

Notation for translation:

$$\overrightarrow{AA'} = (+4, +2)$$

$$A(1,2) \rightarrow A'(1+4, 2+2)$$

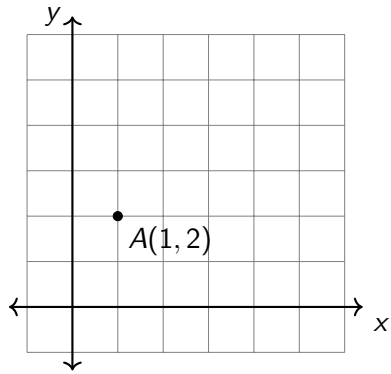
$$T_{+4,+2}$$

Pre-image The original figure

Image The result of a transformation

$\rightarrow$ We say the A is *mapped* to A'.

Prime The prime symbol is used to denote the image (A')



Translate $\triangle ABC$ right one unit and up three units $T_{+1,+3}$

$$(x, y) \to (x + 1, y + 3)$$

$$A(1, 1) \to$$

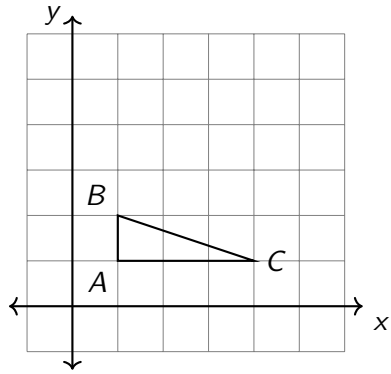
$$B(1, 2) \to$$

$$C(4, 1) \to$$

Rigid motion Move without changing the shape or size (isometry)

Congruent Figures with the same size and shape

Invariant Does not change (lengths, angles, area, perimeter)



Learning Target: I can reflect a figure

HSG.CO.A.5 Congruence transformations

7.2 Wednesday 18 January

Do Now: Find the lengths of the sides of $\triangle ABC$.

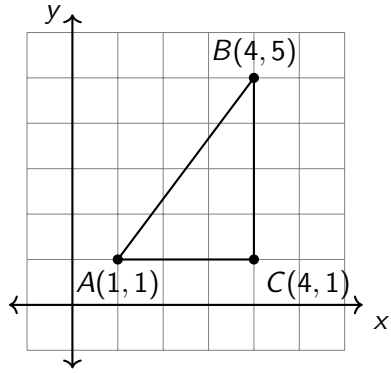
$AC =$

$BC =$

$AB =$

Lesson: Reflection, classwork practice

Homework: Complete classwork, Deltamath assignment



Reflect or flip an object across the y-axis

Reflection is a rigid motion.

$$\triangle ABC \rightarrow \triangle A'B'C'$$

Reflection A transformation that flips an object across a line

Line of reflection The line across which the object is flipped

Correspond Parts that map to each other A corresponds to A'.
