

# Geometry Unit 6: Analytic Geometry

Bronx Early College Academy

Christopher J. Huson PhD

7 December 2022 - 13 January 2023

6.1 Midpoint formula	8 December
6.2 Slope-intercept form	9 December
6.3 Functions, standard form	12 December
6.4 Parallel and perpendicular slopes	13 December

# Learning Target: I can plot a midpoint on the plane

HSG.CO.C.9 Prove theorems about lines and angles

6.1 Thursday 8 December

## Do Now

1. Review your Jumprope grades
2. Find the midpoint  $M$  of  $\overline{AB}$

Lesson: Midpoint and average, classwork practice

Homework: Deltamath midpoint practice (optional extension)

# What do you know about the coordinate plane?

**Coordinates** Values locating a point on a plane  $(x, y)$

**Axis** The two number lines,  $x$  and  $y$ -axis

**Origin** The center of the plane,  $(0, 0)$

**Quadrant** The four quarters of the plane

# The midpoint formula

Given  $A(x_A, y_A)$ ,  $B(x_B, y_B)$ , midpoint

$$M = \left( \frac{x_A + x_B}{2}, \frac{y_A + y_B}{2} \right)$$

# Learning Target: I can use slope-intercept form of linear equations

HSG.CO.C.9 Prove theorems about lines and angles

6.2 Friday 9 December

Do Now: Find the midpoint  $M$  of  $\overline{AB}$

Lesson: Slope,  $y$ -intercept, linear equations

Homework: Deltamath graphing practice  
(optional extension)

## Linear equations of the form $y = mx + b$

**Linear** Straight, constant rate of change

**Intercept** Where the line crosses the axis

$b$  y-intercept, point  $(0, b)$  when  $x = 0$

**Increasing** Going up.  $y$  increases as  $x$  increases

**Decreasing** Going down.  $y$  decreases as  $x$  increases

$m$ , **slope** How steep the line is

$$m = \frac{\text{rise}}{\text{run}} = \frac{y_B - y_A}{x_B - x_A}$$

# Learning Target: I can use the standard form of linear equations

HSG.CO.C.9 Prove theorems about lines and angles

6.3 Monday 12 December

Do Now: Find the equation of  $\overleftrightarrow{AB}$

Lesson: Function notation, vertical and horizontal slopes, the standard form of linear equations (GraspableMath practice)

Homework: Handout problem set

## Function notation, $f(x) = mx + b$

**Function**  $(x, y)$  pairs that satisfy a rule,  
 $f(x) = y$

**Horizontal** Slope is zero,  $m = 0$

**Vertical** Slope is undefined,  $m = \infty$

**Domain** The set of  $x$  values that are allowed

**Range** The set of  $y$  values that are allowed

**Real numbers** The set of all numbers,  $\mathbb{R}$

## Linear equations of the form $ax + by = c$

**Standard form** A linear equation written in the form  $ax + by = c$

**Calculator form** Casios and other calculators use the form  $y = mx + b$

Convert from standard to  $y$ -intercept form. Example:

$$x + 2y = 6$$

# Learning Target: I can find parallel and perpendicular slopes

HSG.CO.C.9 Prove theorems about lines and angles

6.4 Tuesday 13 December

Do Now: Find the equation of  $\overleftrightarrow{AB}$   
Challenge: find the x-intercept

Lesson: Parallel and perpendicular lines,  
negative reciprocals  
Homework: Deltamath problem set

## Parallel lines have the same slope

**Parallel** Lines in the same plane that never intersect

**Skew** Lines that do not intersect and are not parallel

Lines  $k$  and  $l$  are parallel if and only if  $m_k = m_l$ , if their slopes are equal.

## Perpendicular lines slopes' are negative reciprocals

**Perpendicular** Lines that intersect at right angles

**Reciprocals** Two numbers whose product is 1

**Quarter turn**  $90^\circ$  rotation, reversing the sign of the slope and the  $x$  and  $y$  coordinates

Lines  $k$  and  $l$  are perpendicular if and only if  $m_k \times m_l = -1$ , if their slopes are negative reciprocals.
