7.10 Test: Rigid motions, translation, reflection, rotation

1. Slide $\triangle ABC$ to the left four and up five. Label the image $\triangle A'B'C'$.

2. Apply the translation $(x, y) \rightarrow (x - 3, y + 5)$ to the point $P(-2, -5)$.

3. On the axes below, graph the point $N(-3, 2)$ and its image, N' , after a reflection across the x -axis. Mark N' and write it down as a coordinate pair.

4. Identify the transformation that maps $\triangle ABC$ onto its image $\triangle A'B'C'$.

5. State the translation that would map $Q(4, 3)$ onto $Q'(-1, -3)$.

6. On the set of axes below, $\triangle ABC \cong \triangle STU$.

Describe the rigid motion that maps $\triangle ABC$ onto $\triangle STU$.

Name:

7. Triangle $A'B'C'$ is the image of triangle ABC after a translation of 2 units to the right and 3 units up. Is triangle ABC congruent to $A'B'C'$? Explain why.

8. Rotate $\triangle JKL$ 90° counterclockwise around the origin on the axes below, labeling the image $\triangle J'K'L'$.

9. Draw the line of reflection that would map $\triangle ABC$ onto $\triangle A'B'C'$.

10. On the axes below, plot the point $A(-4, -1)$ and its image, A' , after the translation $(x, y) \rightarrow (x + 6, y - 3)$. Label the image as a coordinate pair.

11. The image of triangle ABC after a translation is $\triangle A'B'C'$. Is the area of the triangle greater, smaller, or the same after the translation? Justify your answer.

12. Determine and state the transformation mapping $\triangle PQR$ onto $\triangle STU$.

Name:

13. State the translation that would map $C(-4, 0)$ onto $C'(3, -3)$. (the use of the grid below is optional)

14. What are the coordinates of the image of $B(2, 5)$ after a reflection across the x -axis?

(a) $(-2, 5)$

(b) $(5, 2)$

(c) $(2, -5)$

(d) $(-5, -2)$

15. Check those transformations that are rigid motions.

☐ Dilation

☐ Translation

☐ Reflection

☐ Rotation

☐ An isometry

☐ Horizontal stretch

16. Which of the following would map $\triangle CAT \rightarrow \triangle C'A'T'$?

- T F Reflected across the y -axis
 T F Translated six to the left, down zero
 T F Reflected across the y -axis, then slid to the left two
 T F $(x, y) \rightarrow (x - 6, y + 0)$
 T F Rotated 90° counterclockwise around the origin
 T F Reflected across the line $x = -1$

17. What are the coordinates of the image of $C(3, 1)$ after a rotation of 90° counterclockwise around the origin?

- (a) $(4, 4)$
 (b) $(0, 4)$
 (c) $(-4, 0)$
 (d) $(0, -4)$

18. Apply a translation of $(x, y) \rightarrow (x + 7, y + 3)$ to $\triangle JKL$ and then reflect the image across the x -axis. Draw both images $\triangle J'K'L'$ and $\triangle J''K''L''$ on the set of axes below, labeling the vertices.
