

Geometry Unit 6: Analytic Geometry

Bronx Early College Academy

Christopher J. Huson PhD

7 December 2022 - 13 January 2023

6.1 Midpoint formula	8 December
6.2 Slope-intercept form	9 December
6.3 Functions, standard form	12 December
6.4 Parallel and perpendicular slopes	13 December
6.5 Review linear equations	13 December
6.6 Quiz linear equations	16 December
6.7 Systems	3 January

Learning Target: I can plot a midpoint on the plane

HSG.CO.C.9 Prove theorems about lines and angles

6.1 Thursday 8 December

Do Now

1. Review your Jumprope grades
2. Find the midpoint M of \overline{AB}

Lesson: Midpoint and average, classwork practice

Homework: Deltamath midpoint practice (optional extension)

What do you know about the coordinate plane?

Coordinates Values locating a point on a plane (x, y)

Axis The two number lines, x and y -axis

Origin The center of the plane, $(0, 0)$

Quadrant The four quarters of the plane

The midpoint formula

Given $A(x_A, y_A)$, $B(x_B, y_B)$, midpoint

$$M = \left(\frac{x_A + x_B}{2}, \frac{y_A + y_B}{2} \right)$$

Learning Target: I can use slope-intercept form of linear equations

8.F.A.3 Interpret $y = mx + b$ as a linear function, whose graph is a straight line

6.2 Friday 9 December

Do Now: Find the midpoint M of \overline{AB}

Lesson: Slope, y-intercept, linear equations
Homework: Deltamath graphing practice
(optional extension)

Linear equations of the form $y = mx + b$

Linear Straight, constant rate of change

Intercept Where the line crosses the axis

b y-intercept, point $(0, b)$ when $x = 0$

Increasing Going up. y increases as x increases

Decreasing Going down. y decreases as x increases

m , **slope** How steep the line is

$$m = \frac{\text{rise}}{\text{run}} = \frac{y_B - y_A}{x_B - x_A}$$

Learning Target: I can use the standard form of linear equations

8.F.A.3 Interpret $y = mx + b$ as a linear function, whose graph is a straight line 6.3 Monday 12 December

Do Now: Find the equation of \overleftrightarrow{AB}

Lesson: Function notation, vertical and horizontal slopes, the standard form of linear equations (GraspableMath practice)

Homework: Handout problem set

Function notation, $f(x) = mx + b$

Function (x, y) pairs that satisfy a rule,
 $f(x) = y$

Horizontal Slope is zero, $m = 0$

Vertical Slope is undefined, $m = \infty$

Domain The set of x values that are allowed

Range The set of y values that are allowed

Real numbers The set of all numbers, \mathbb{R}

Linear equations of the form $ax + by = c$

Standard form A linear equation written in the form $ax + by = c$

Calculator form Casios and other calculators use the form $y = mx + b$

Convert from standard to y -intercept form. Example:

$$x + 2y = 6$$

Learning Target: I can find parallel and perpendicular slopes

HSG.GPE.B.5 The slope criteria for parallel and perpendicular lines

6.4 Tuesday 13 December

Do Now: Find the equation of \overleftrightarrow{AB}
Challenge: find the x-intercept

Lesson: Parallel and perpendicular lines,
negative reciprocals
Homework: Deltamath problem set

Parallel lines have the same slope

Parallel Lines in the same plane that never intersect

Skew Lines that do not intersect and are not parallel

Lines k and l are parallel if and only if $m_k = m_l$, if their slopes are equal.

Perpendicular lines slopes' are negative reciprocals

Perpendicular Lines that intersect at right angles

Reciprocals Two numbers whose product is 1

Quarter turn 90° rotation, reversing the sign of the slope and the x and y coordinates

Lines k and l are perpendicular if and only if $m_k \times m_l = -1$, if their slopes are negative reciprocals.

Learning Target: I can graph linear equations

8.F.A.3 Interpret $y = mx + b$ as a linear function, whose graph is a straight line 6.5 Wednesday 14 December

Prequiz roundtable groupwork

Do Now: Organize and complete worksheets

6.5 Prequiz: Review slope-intercept form of linear equations

6.4 Classwork: Parallel and perpendicular slopes

6.3 Homework: Standard form

6.2 Classwork: Linear equations

6.1 Classwork: Midpoints

Lesson: Peer review of linear equations

Homework: Study for quiz on Thursday

Deltamath due Friday

Quiz: Slope and linear equations

6.6 Friday 16 December

8.F.A.3 Interpret $y = mx + b$ as a linear function, whose graph is a straight line

HSG.GPE.B.5 The slope criteria for parallel and perpendicular lines

Do Now: Turn in worksheets (Deltamath due)

Open notebook, calculator allowed

Learning Target: I can find parallel and perpendicular slopes

HSG.REI.C.6 Solve systems of linear equations

6.7 Tuesday 3 January

Do Now: Find the equations of \overleftrightarrow{AC} and \overleftrightarrow{BC}
Are they perpendicular?

Lesson: Systems of equations, two intersecting lines
Homework: Deltamath problem set

Systems of equations

$$\overleftrightarrow{AC} : y = +\frac{1}{2}x - 1$$

$$\overleftrightarrow{BC} : y = -\frac{3}{2}x + 3$$

Lines are not perpendicular: $\frac{1}{2} \times -\frac{3}{2} \neq -1$ (slopes are not negative reciprocals)

Systems Multiple equations with the same variables

Intersection Point that satisfies both equations

Solution Values (x, y) that satisfy both equations

T-chart list of (x, y) pairs satisfying a equation

$f(x)$	
x	y
-2	
0	
2	
	4

$g(x)$
