

Geometry Unit 7: Congruence transformations

Bronx Early College Academy

Christopher J. Huson PhD

17 January 2023 - 3 February 2023

7.1 Translation

17 January

7.2 Reflection

18 January

7.3 Rotation

20 January

7.4 Rotation

23 January

Learning Target: I can slide a figure

HSG.CO.A.5 Congruence transformations

7.1 Tuesday 17 January

Do Now

1. Review your Jump rope grades
2. Find the rise and run of the line segment \overline{AB} .

Lesson: Translation, classwork practice

Homework: Complete the classwork practice

Translation

Rise is plus 4, run is plus 3.

$$A(2, 1) \rightarrow B(5, 5)$$

Translate Move a figure horizontally and vertically (slide)

Vector A quantity with both magnitude and direction

$$\overrightarrow{AB} = (3, 4)$$

Example: Translate point A up two units and right four units

Notation for translation:

$$\overrightarrow{AA'} = (+4, +2)$$

$$A(1, 2) \rightarrow A'(1 + 4, 2 + 2)$$

$$T_{+4, +2}$$

Pre-image The original figure

Image The result of a transformation

→ We say the A is *mapped* to A' .

Prime The prime symbol is used to denote the image (A')

Translate $\triangle ABC$ right one unit and up three units $T_{+1,+3}$

$$(x, y) \rightarrow (x + 1, y + 3)$$

$$A(1, 1) \rightarrow$$

$$B(1, 2) \rightarrow$$

$$C(4, 1) \rightarrow$$

Rigid motion Move without changing the shape or size (isometry)

Congruent Figures with the same size and shape

Invariant Does not change (lengths, angles, area, perimeter)

Learning Target: I can reflect a figure

HSG.CO.A.5 Congruence transformations

7.2 Wednesday 18 January

Do Now: Find the lengths of the sides of $\triangle ABC$.

$AC =$

$BC =$

$AB =$

Lesson: Reflection, classwork practice

Homework: Complete classwork, Deltamath assignment

Reflect or flip an object across the y -axis

Reflection is a rigid motion.

$$\triangle ABC \rightarrow \triangle A'B'C'$$

Reflection A transformation that flips an object across a line

Line of reflection The line across which the object is flipped

Correspond Parts that map to each other
 A corresponds to A' .

Learning Target: I can rotate a figure

HSG.CO.A.5 Congruence transformations

7.3 Friday 20 January

Do Now: Find the angle measures of right $\triangle ABC$.

$$m\angle A = 30^\circ$$

$$m\angle B =$$

$$m\angle C =$$

Lesson: Rotation, classwork practice

Homework: Complete classwork, Deltamath assignment

Learning Target: I can employ multiple rigid motions

HSG.CO.A.5 Congruence transformations

7.4 Friday 20 January

Do Now: Rotate $\triangle ABC$ counterclockwise 90° around the origin.

$A(0, 0) \rightarrow$

$B(4, 3) \rightarrow$

$C(4, 0) \rightarrow$

Lesson: Composition of transformations,
mixed practice

Homework: Complete classwork, Deltamath
assignment

Solution: Rotate $\triangle ABC$ counterclockwise 90° around the origin.

$$A(0,0) \rightarrow A'(0,0)$$

$$B(4,3) \rightarrow B'(-3,4)$$

$$C(4,0) \rightarrow C'(0,4)$$

Check for understanding: What is the measure of angle $\angle CAC'$?

A *composition* is multiple transformations, one after the other

Example: Translate $\triangle ABC$ to the right 5 units then reflect it over the x -axis.

$$T_{+5,0}$$

reflect_{x-axis}

$$A(-1, 2) \rightarrow$$

$$B(-4, 3) \rightarrow$$

$$C(-4, 2) \rightarrow$$

Translate $\triangle ABC$ to the right 5 units then reflect it over the x -axis.

$T_{+5,0}$ $reflect_{x-axis}$

$$A(-1, 2) \rightarrow A'(4, 2) \rightarrow A''(4, -2)$$

$$B(-4, 3) \rightarrow B'(1, 3) \rightarrow B''(1, -3)$$

$$C(-4, 2) \rightarrow C'(1, 2) \rightarrow C''(1, -2)$$
