

26 Triangles ABC and DEF are graphed on the set of axes below.

Describe a sequence of transformations that maps $\triangle ABC$ onto $\triangle DEF$.

28 A circle has a radius of 6.4 inches. Determine and state, to the *nearest square inch*, the area of a sector whose arc measures 80° .

29 A large snowman is made of three spherical snowballs with radii of 1 foot, 2 feet, and 3 feet, respectively. Determine and state the amount of snow, in cubic feet, that is used to make the snowman.

[Leave your answer in terms of π .]

30 The volume of a triangular prism is 70 in^3 . The base of the prism is a right triangle with one leg whose measure is 5 inches. If the height of the prism is 4 inches, determine and state the length, in inches, of the other leg of the triangle.

- 27** As shown in the diagram below, a symmetrical roof frame rises 4 feet above a house and has a width of 24 feet.

Determine and state, to the *nearest degree*, the angle of elevation of the roof frame.

Part III

Answer all 3 questions in this part. Each correct answer will receive 4 credits. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. Utilize the information provided for each question to determine your answer. Note that diagrams are not necessarily drawn to scale. For all questions in this part, a correct numerical answer with no work shown will receive only 1 credit. All answers should be written in pen, except for graphs and drawings, which should be done in pencil. [12]

- 32** Cape Canaveral, Florida is where NASA launches rockets into space. As modeled in the diagram below, a person views the launch of a rocket from observation area A , 3280 feet away from launch pad B . After launch, the rocket was sighted at C with an angle of elevation of 15° . The rocket was later sighted at D with an angle of elevation of 31° .

Determine and state, to the *nearest foot*, the distance the rocket traveled between the two sightings, C and D .
