## 5.4 Rotation

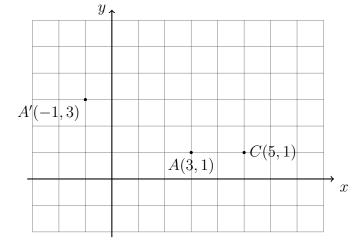

1. Do Now: A rotation maps triangle DEF onto triangle LMN.

Write the letter or letters for each corresponding object.

- (a)  $E \rightarrow$
- (b)  $F \rightarrow$
- (c)  $DF \rightarrow$

- 2. Do Now: A rotation centered at the origin maps A to A', as shown,  $A(3,1) \rightarrow A'(-1,3)$ .
  - (a) Which correctly identifies the rotation?
    - (A) Clockwise 180°
    - (B) Counter clockwise  $180^{\circ}$
    - (C) Clockwise  $90^{\circ}$
    - (D) Counter clockwise 90°
    - (E) None of the above

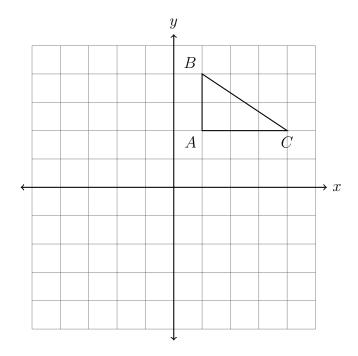

(b) If the same translation is applied to  $C(5,1) \to C'(x,y)$ , plot and label the point C' as an ordered pair.

3. Rotate the triangle 90° clockwise around the origin,  $\triangle ABC \rightarrow \triangle A'B'C'$ . Complete the table of the coordinates and plot and label the image on the grid.

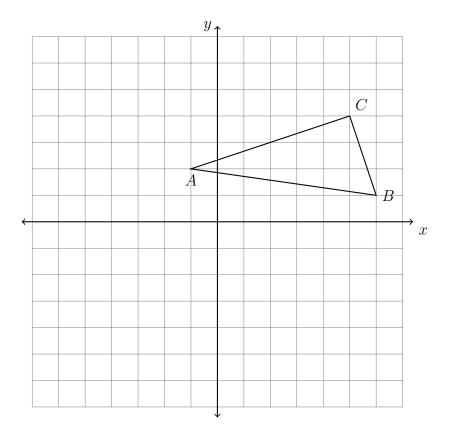

$$A(1,2) \rightarrow$$

$$B(1,4) \rightarrow$$

$$C(4,2) \rightarrow$$

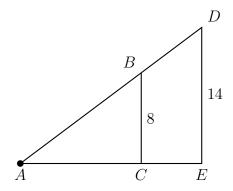

4.  $\triangle ABC$  is shown with vertices A(-1,2), B(6,1), and C(5,4). Rotate the triangle 90° counter clockwise around the origin. Write down its coordinates in a table and plot and label it on the graph.

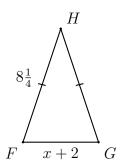

5. Do Now: A dilation centered at A maps  $\triangle ABC \rightarrow \triangle ADE.$  Given that BC=8, DE=14.

Write the value of the scale factor k in the box.

6. Exam review: The perimeter of the isosceles  $\triangle FGH$  is  $19\frac{1}{2}$  with  $\overline{FH}\cong \overline{GH}$ . If FG=x+2 and  $FH=8\frac{1}{4}$ , find x.

Show your work with an equation.

Write the value of x in the box.
