Unit 6: Analytic geometry   Name:

9 December 2022

## 6.2 Classwork: Linear equations   8.F.A.3

The slope of a line: $m = \dfrac{y_2 - y_1}{x_2 - x_1}$

1. Find the slope of the line through the points $A(3, 4)$, $B(9, 8)$.

The slope-intercept equation of a line

$y = mx + b$, where m is the slope and b is the y-intercept

2. The line l has the equation $y = \frac{3}{2}x - 1$.
    (a) Write down it's slope and y-intercept. $m =$ $b =$

    (b) Is the point $(4, 4)$ on the line l? Justify your answer.

3. A line is shown on the grid below.

    (a) Write down it's slope, y-intercept.
        $m =$ $b =$

    (b) Write down the equation of the line.

    (c) State the coordinates of the point P.

4. Draw a straight line through the points A and B shown on the grid below.

(a) Write down the line's y-intercept.
$b =$

(b) Write down the slope of the line.
$m =$

(c) Write down the equation of the line.

5. Find the slope of the line through the points $(-1, 3)$ and $(5, 0)$.

6. A linear equation is graphed below.

(a) State the coordinates of the point A.

(b) Write down the line's slope.
$m =$

(c) Write down it's y-intercept.
$b =$

(d) Write down the equation of the line.
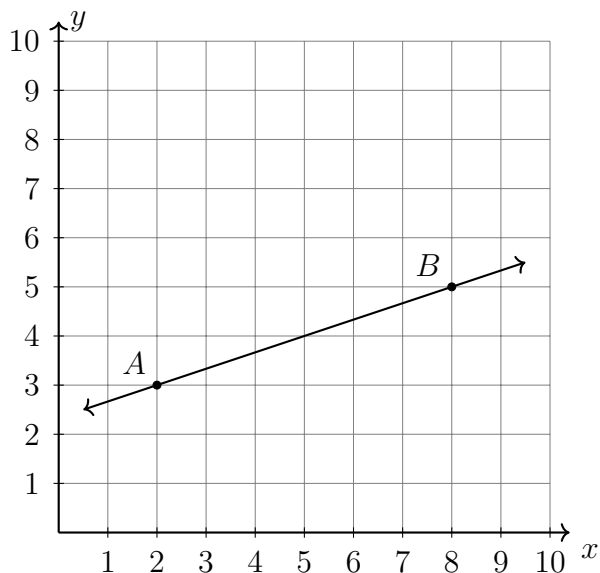

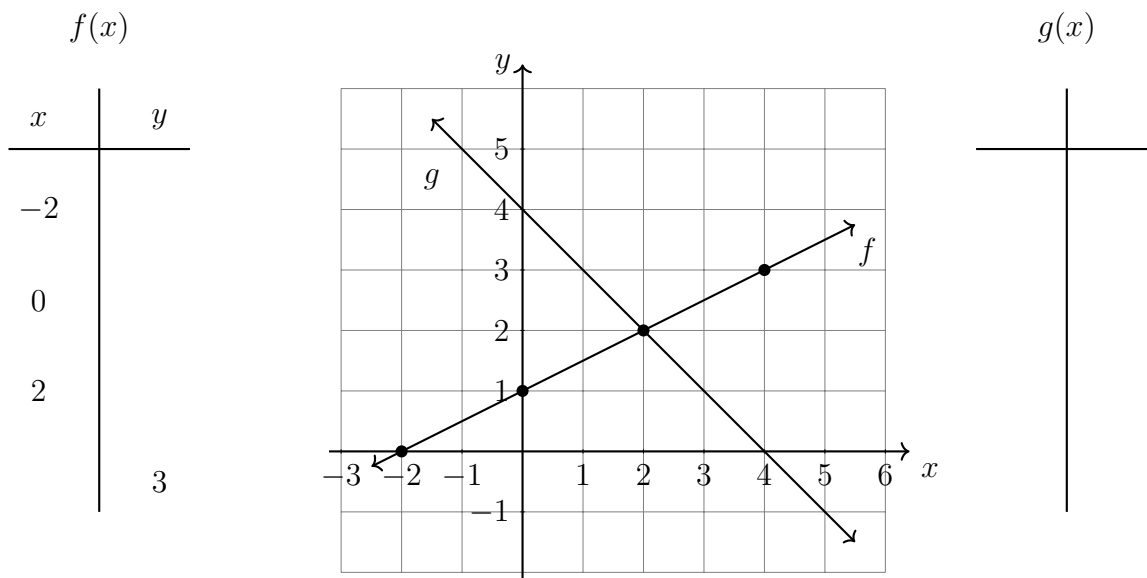

(e) Find the x-intercept.

The slope of a line

"rise over run": $m = \dfrac{y_2 - y_1}{x_2 - x_1}$

7. Find the slope of the line through the points $A(2,3)$, $B(8,5)$.

8. Two lines are graphed below.

    (a) Complete the T-tables for each.

    (b) Write down the equations for each.

$f(x)$

x	y
-2	
0	
2	
	3

$g(x)$

9. The line l is graphed at right.
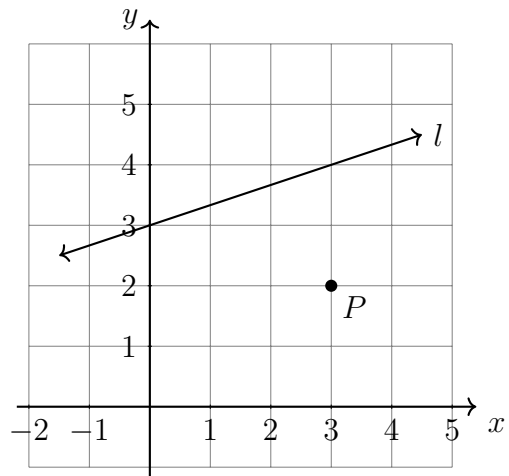

(a) Write down the line's slope.

$m =$

(b) Write down it's y-intercept.

$b =$

(c) Write down the equation of the line.

(d) Draw a line parallel to l through point P. (use a straight edge for full credit)

10. Write the linear equation $y - 5 = \dfrac{2}{3}(x - 3)$ in the form $y = mx + c$.

11. Two lines are graphed below.

    (a) Complete the T-tables for each.

    (b) Write down the equations for each.

$f(x)$ $g(x)$

x	y
-2	
0	
2	
	3

12. The line l is graphed at right.

    (a) Write down the line's slope.
 $m =$

    (b) Write down it's y-intercept.
        $b =$

    (c) Write down the equation of the line.

    (d) Draw a line parallel to l through point
        P. (use a straight edge for full credit)

13. Find the slope of the line through the points $(3, -2)$ and $(-3, 2)$.

14. Write the linear equation $y - 5 = \dfrac{2}{5}(x - 10)$ in the form $y = mx + c$.

15. Is the point $(-4, 1)$ on the line $y = \dfrac{1}{2}x + 3$? Support your answer algebraically.

16. Two lines are graphed below.

   (a) Complete the T-tables for each.

   (b) Write down the equations for each.

$f(x)$ $g(x)$

x	y
-2	
0	
2	
	4
