1.1 Classwork: Frequency Tables

1. Twenty-four students were asked how they usually travel to school. The replies were recorded in the order they were given:

bus subway walk car subway walk bike subway
walk bus subway subway car walk subway bus
subway bike walk bus car subway walk bus

- Complete the tally and frequency table below.
- How many students were surveyed altogether?
- Write down the mode of the data.
- What fraction of the students walk to school? Give your answer as a fraction or as a percentage.
- Is *how you travel to school* a categorical variable or a quantitative variable? Answer in one sentence.

How you travel	Tally	Frequency
walk	I	6
bus		5
subway		8
car		3
bike		2

Teacher

total 24 ✓

(b) 24

(c) Subway

(d) $\frac{6}{24} = \frac{1}{4}$

(e) Categorical. Modes of transportation are not quantities, ~~the~~ rather types.

2. Each of the 25 students in a class was asked how many brothers and sisters they have. The replies were:

1 2 0 3 1
 1 2 4 1 2
 1 3 0 2 1
 1 2 3 1 2
 1 4 0 2 3

- (a) Complete the frequency table below.
 (b) How many students are in the class?
 (c) Write down the mode of the data.
 (d) How many students have at least 2 brothers and sisters?
 (e) Is *number of brothers and sisters* discrete or continuous? Give a short reason.

Number of siblings	Tally	Frequency
0	///	3
1		9
2		7
3		4
4		2

- (b) 25 Total 25
 (c) 1 sibling
 (d) $7 + 4 + 2 = 13$
 (e) Discrete. You cannot have a fractional person, so the variable must be a whole number.
