

1.4 Classwork: Measurement quiz review

Reference (provided). average speed = $\frac{\text{distance}}{\text{time}}$

$$1 \text{ in.} = 2.54 \text{ cm} \quad 1 \text{ m} \approx 3.28 \text{ ft} \quad 1 \text{ km} = 1000 \text{ m}$$

$$1 \text{ m} = 100 \text{ cm} \quad 1 \text{ cm} = 10 \text{ mm} \quad 1 \text{ h} = 3600 \text{ s}$$

1. Write down the number of significant digits in each measurement.

(a) 7.25 m

(c) 0.045 kg

(e) 20.10 cm

(b) 3.0 s

(d) 105 g

(f) $6.0 \times 10^3 \text{ m}$

2. Round each value to three significant figures. Copy the calculator display followed by three dots, then round: $\sqrt{2} = 1.4142135 \dots \approx 1.41$

(a) $\sqrt{10}$

(b) $\frac{1}{7}$

3. Write in scientific notation, rounded to three significant figures.

(a) The distance from the Earth to the Sun, 149,600,000 km

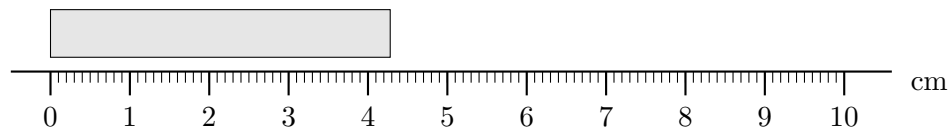

(b) The thickness of a sheet of paper, 0.000102 m

4. Write each value as an ordinary decimal number.

(a) The height of Mount Everest, $8.849 \times 10^3 \text{ m}$

(b) The mass of a paper clip, $1.0 \times 10^{-3} \text{ kg}$

5. The bar below is measured with a centimeter ruler marked in millimeters.

- (a) Record the length of the bar. Include one estimated digit — the last digit, the one you are not certain of.
- (b) Write the same length in millimeters, and again in meters.
6. Convert between units, rounding to three significant figures. Write the conversion as a fraction and show the units cancelling.
- (a) The Leaning Tower of Pisa is 56.7 meters tall. What is its height in feet?
- (b) A sheet of US letter paper is 11.0 inches long. What is its length in centimeters?
7. A student walks 60.0 meters down the hallway in 45.0 seconds. Find the average speed in meters per second, rounded to three significant figures.
8. A Category 1 hurricane has winds of at least 119 kilometers per hour. What is this speed in meters per second? Write the conversion as a single chain of fractions.
